

GreenOps Web App

Project	GreenOps - Landscaping Business Management Web App
Purpose	Manage customers, crew, schedules, jobs, estimates, invoices, reports, subscriptions, and team access.
Frontend	HTML, CSS, and JavaScript
Backend	Firebase

1. Project Overview

GreenOps is a landscaping operations portal designed to help a landscaping business manage daily field work, customers, crew members, estimates, invoices, reports, and account settings from one web application.

The project started as a basic web folder and was gradually improved into a working business management dashboard with real data entry, role-based access, backend storage, and professional UI updates.

2. Work Completed From the Beginning

Project setup and local running

- Opened and organized the GreenOps project folder in VS Code.
- Fixed run commands and verified the app locally using npm run dev on port 8080.
- Added a backend folder and connected the frontend to the local backend server running on port 3000.

Login, account, and backend storage

- Added login, create account, logout, and forgot password screens.
- Made account creation admin-focused and added password rules: minimum 8 characters with uppercase, lowercase, number, and special character.
- Connected login and app data to backend storage instead of only keeping temporary browser data.
- Added logout confirmation with Yes/No choice.

Role-based access

- Added Admin, Administrator, and Crew access flows.
- Admin can access all screens and create login credentials for Administrator and Crew users.
- Administrator can access operations screens such as Schedule, Customers, Estimates, Jobs, Invoices, and Crew.
- Crew users see only Profile and My Jobs, keeping the crew portal simple and focused.

Dashboard and analytics

- Improved the dashboard with cards for revenue, today's jobs, pending estimates, unpaid invoices, and active crew.
- Added job status overview, revenue by service, collections chart, today's schedule, and crew status.
- Added real date, time, and temperature display in the top bar.

Customers, crew, jobs, estimates, and invoices

- Added real add, view, edit, and delete flows for customers, crew members, jobs, estimates, and invoices.
- Added search/filter, dashboard cards, recent-first ordering, and cleaner action buttons across tabs.
- Added PDF export buttons for customers, estimates, jobs, invoices, crew, and reports.
- Added confirmation popups before delete actions and centered success messages.

Schedule and job operations

- Redesigned the Schedule tab into a professional weekly calendar layout.
- Set working hours from 8 AM to 6 PM and displayed scheduled jobs inside the correct time slots.
- Updated schedule cards to show both customer name and assigned crew name.
- Added job priority, duration, equipment/materials, customer notes, and status handling.

Crew portal

- Created a dedicated crew portal with Profile and My Jobs tabs.
- Crew can edit basic profile details, phone, email, profile photo, availability, skills, and emergency contact.
- Crew can view assigned jobs, start jobs, complete jobs, update checklist items, add notes, and upload photos.
- Admin and Administrator can see crew-updated notes and photos from their portal.

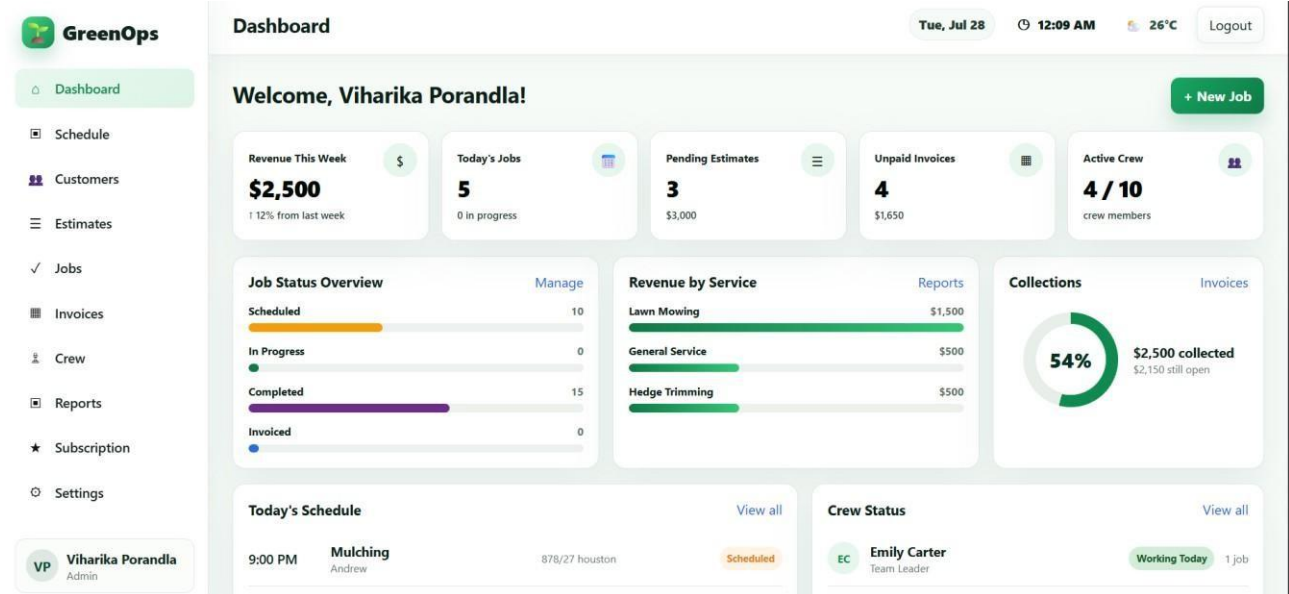

Reports, settings, and subscription

- Added Reports & Analytics page with revenue, paid/unpaid amounts, average job value, top service, and collection rate.
- Added Settings page with Company Settings and Team Logins tabs.
- Added a Subscription page with pricing plan cards and professional checkout-style flow.
- Improved fonts, colors, spacing, icons, and layout consistency across the website.

3. Current Website Screenshots

Administrator

Settings page with company settings and team login creation for administrator and crew accounts.

5. Current Status

- The website has a working GreenOps layout with main business modules.
- Core data flows are connected to backend storage locally.
- Dashboard, Schedule, Customers, Jobs, Crew, Invoices, Estimates, Reports, Subscription, and Settings pages are available.
- Role-based UI is available for Admin, Administrator, and Crew accounts.
-

6. Overall Project Updates

Summary of features added and improvements implemented

Project overview

Professional workflows, secure account access, billing, team management, and operational reporting.

Dashboard and user interface

- Added operational KPI cards, job status overview, six-month revenue, collections, daily schedule, and crew status.
- Standardized navigation and dashboard icons, improved responsive layouts, and simplified the top bar.

Authentication, data security, and account isolation

- Connected Firebase Authentication to a protected Node.js/Express backend for Admin, Administrator, and Crew users.
- Added password-reset emails, account-verification emails, resend verification, secure service-account handling, and isolated workspaces for every Admin account.

Estimates and job workflow

- Added complete estimate follow-up tracking: estimate date, follow-up dates, approval/rejection dates, conversion date, expiry, reminders, and linked job number.
- Improved estimate-to-job conversion and automatic Scheduled status when a job is moved to a future date.

Invoices and payments

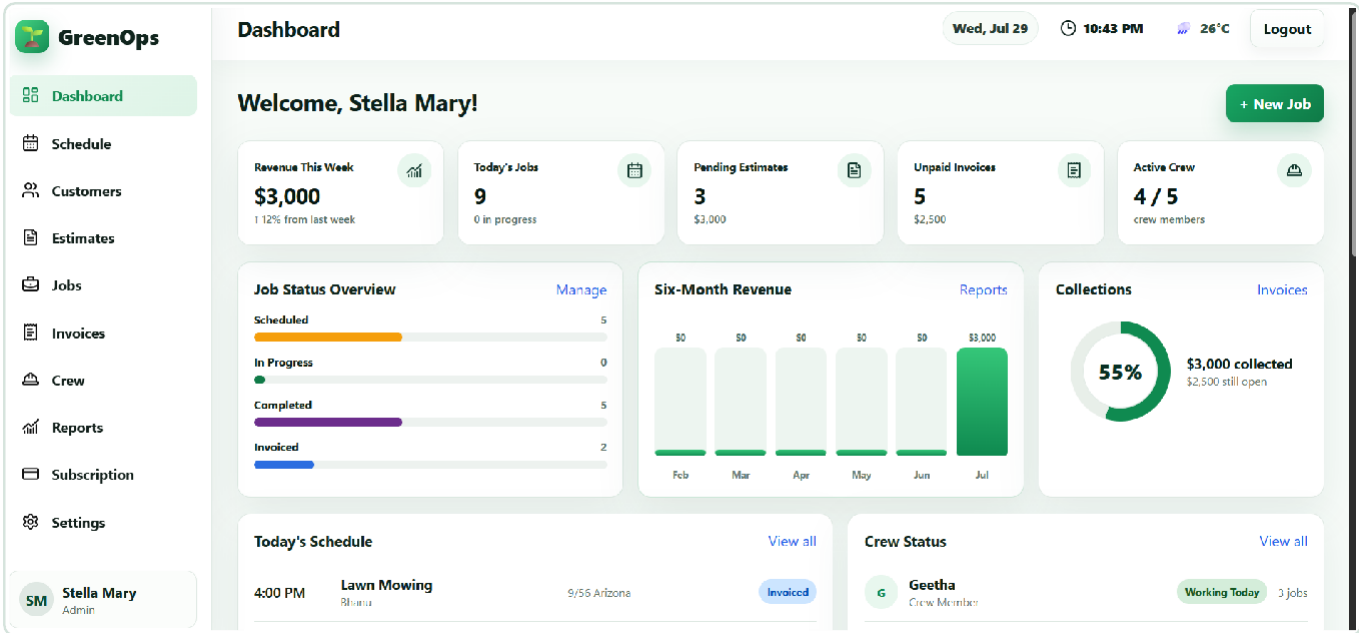

- Standardized job-to-invoice conversion and added line items, tax, discounts, installments, payment methods, payment history, receipts, and linked-job details.
- Added billing totals for paid, due, partially paid, overdue, and collection rate.

Crew and user management

- Combined Crew onboarding with Firebase login creation and added name, email, phone, role, status, availability, address, emergency contact, skills, and notes.
- Added editable Administrator and Crew profiles, optional password changes, Active/Inactive status, and automatic Crew-page creation.

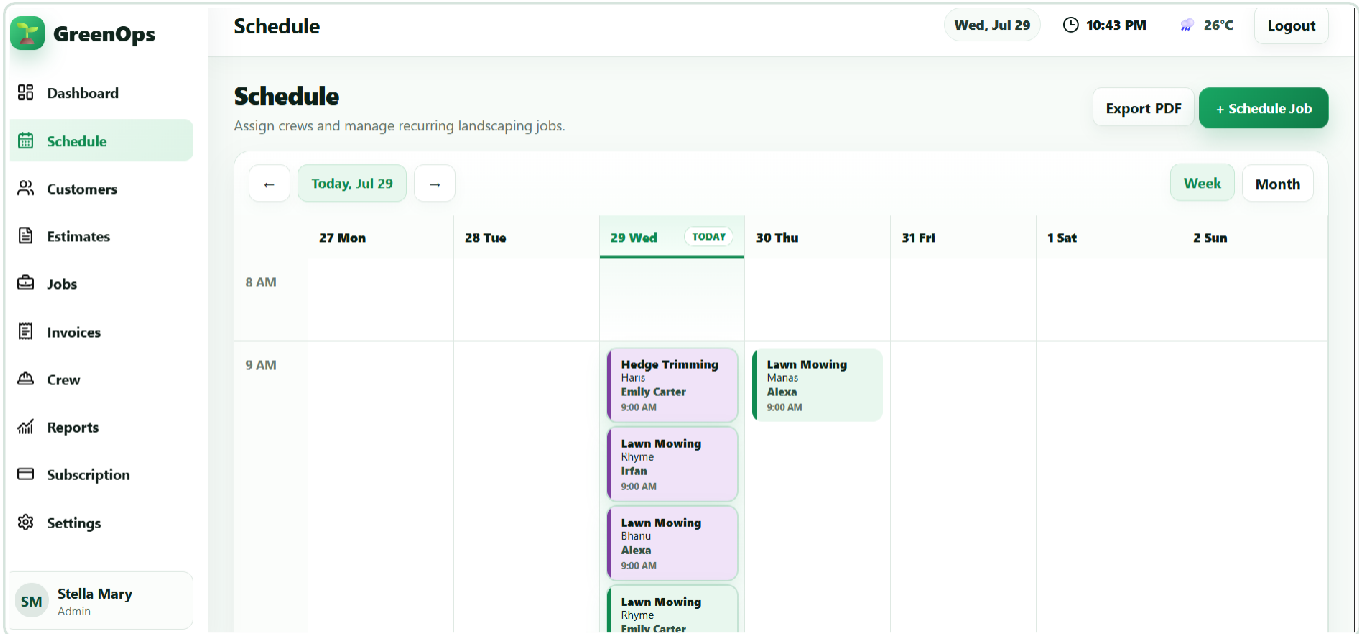

7. Updated Application Screens

Screenshot 1

Professional dashboard with revenue, job, estimate, invoice, crew, job-status, collection, schedule, and six-month revenue information.

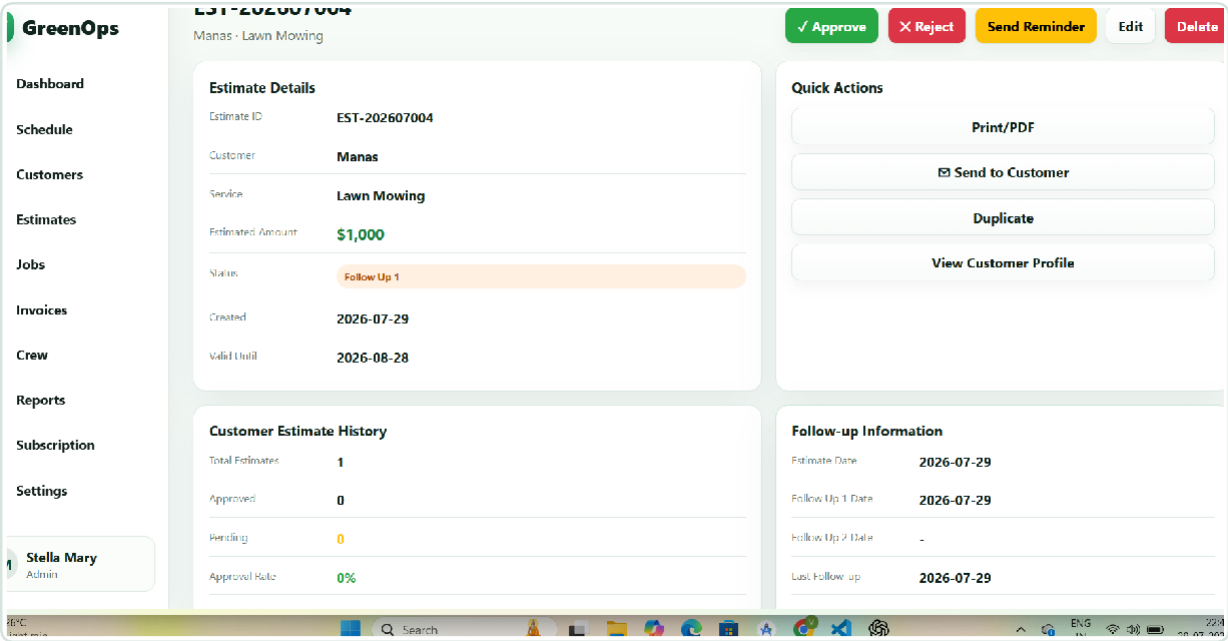

Screenshot 2

Weekly schedule with dated columns, time slots, customer work, assigned crews, status colors, and PDF export.

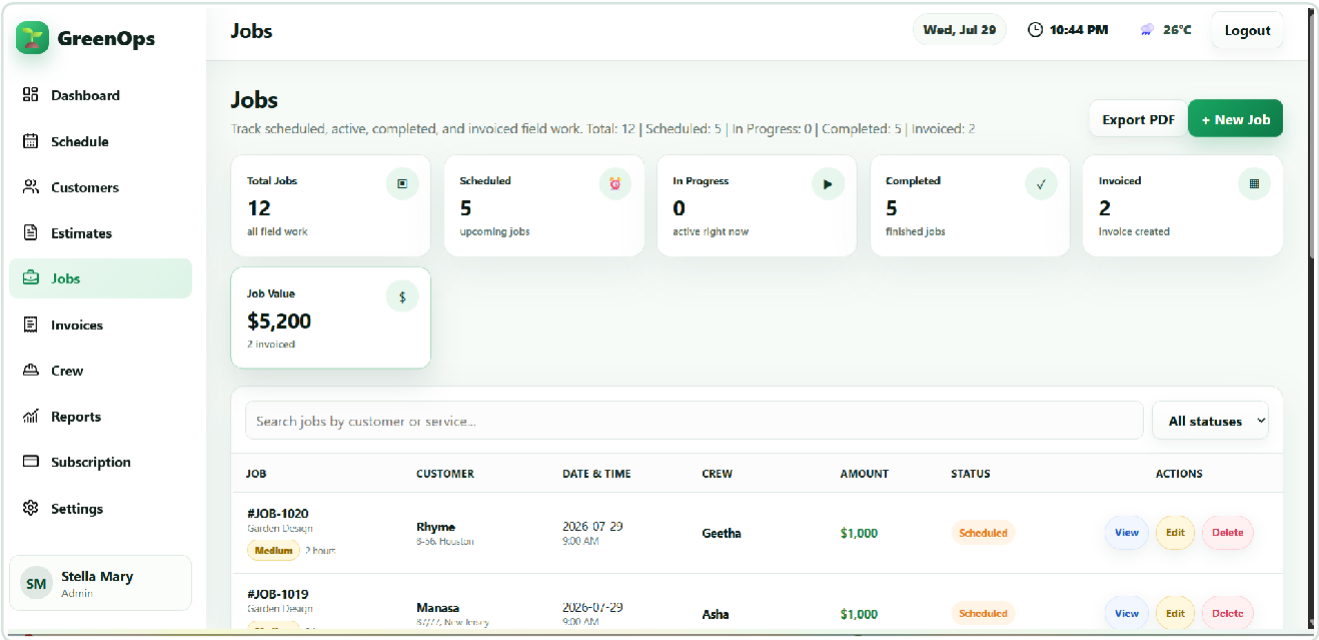

7. Updated Application Screens

Screenshot 3

Estimate detail showing Follow Up 1 status, estimate and follow-up dates, approval actions, customer history, and quick actions.

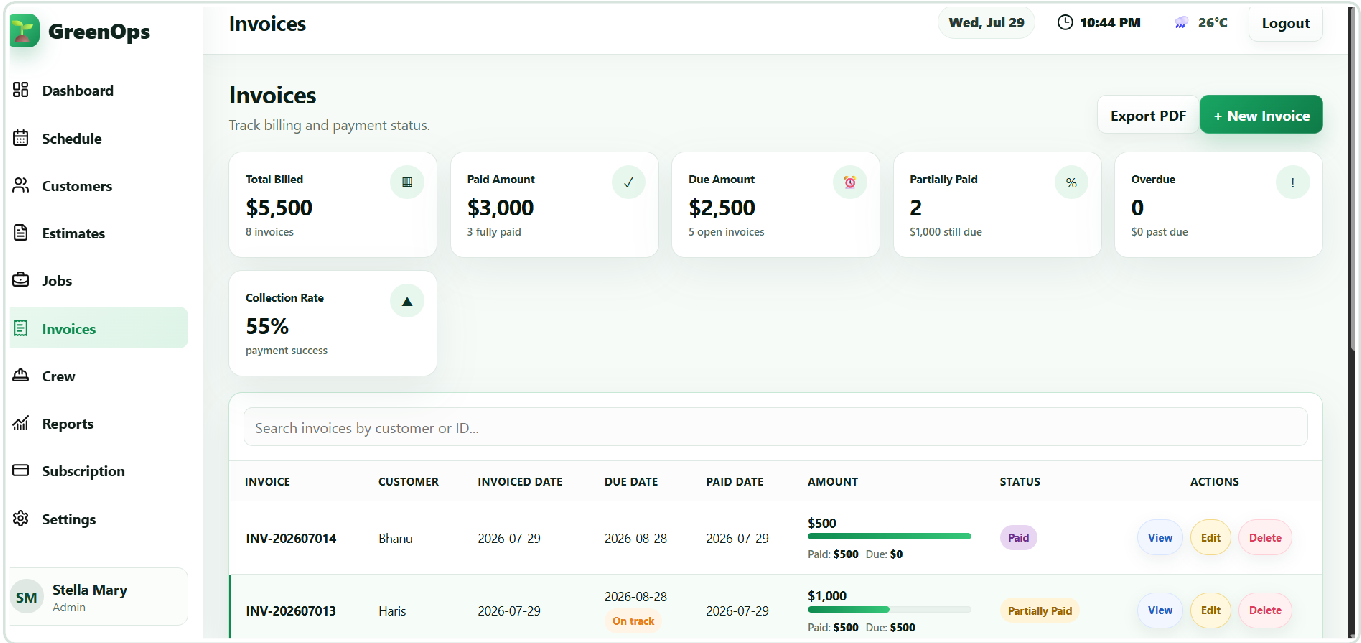

Screenshot 4

Jobs page with status totals, job value, customer and crew assignments, filters, and job-level actions.

8. Billing and Delivery Outcome

Screenshot 5

Invoices page showing total billed, paid and due amounts, partially paid invoices, overdue totals, collection rate, and invoice actions.

Overall project outcome

- Core business modules now share consistent workflows and visual styling.
- Admin workspaces are isolated; team users receive role-based access.
- Operational data is stored through the backend instead of temporary page state.
- Estimate, job, crew, and invoice records now retain useful status and activity history.
- Frontend and backend syntax checks passed, and the production build completed successfully.

Dashboard and navigation

- Added a dedicated Services tab between Customers and Estimates, including service rates, categories, duration, usage, taxable status, search, filtering, and add/edit/delete actions.
- Added an Admin My Profile page with identity, company, account status, workspace ownership, subscription, and profile details.
- Improved dashboard card alignment, converted six-month revenue to a vertical bar graph, and replaced generic recent-activity plus symbols with customer and service icons.

Invoices and payments

- Expanded invoice creation and editing with invoice number, project name, service, tax rate, line items, quantities, rates, totals, paid amount, due amount, and payment date.
- Fixed invoice editing for legacy DD-MM-YYYY dates and improved modal width, scrolling, responsive columns, and the sticky Save/Cancel footer.
- Made Paid Amount and Latest Payment Date editable. Due totals and payment status now update automatically, and manual changes stay synchronized with Payment History.
- Improved invoice summary cards, payment progress, paid/due calculations, line-item persistence, and job-to-invoice linking.

Reports, settings, and interface

- Improved Reports with date filters, filtered PDF/CSV export, Invoice Collection, and an interactive Service Revenue vertical bar graph.
- Simplified Reports by removing Monthly Revenue, Revenue Status, and Invoice Aging after review, while retaining the core financial summary.
- Improved Team Logins and Settings layouts, standardized status selectors to show Select status..., and refined responsive spacing across the application.
- Updated Services, My Profile, dashboard, invoice, and report interfaces with consistent GreenOps styling and production-ready cache versions.

Profile Notes

No profile notes added.

Dashboard

Crew and revenue cards now open useful details.

Invoices

Job lookup, payment date, PDF mail, and paid watermark refined.

Services

Linked Jobs now redirects to the Jobs screen.

Dashboard and Reporting

- Revenue This Week now opens Reports with the current seven-day payment details.
- Reports weekly revenue table was redesigned with summary cards first, a contained scroll area, and a visible Amount column.
- Active Crew was renamed to Crew Working Today for clearer meaning.
- Crew Working Today now counts after duplicate job records are consolidated, so it matches Today's Jobs.

Invoice Improvements

- Invoice Job No. is mandatory and can be entered manually, with customer, project, service, and rate auto-filled from the matched job.
- Invoice email sending now uses the server route and attaches a generated PDF invoice instead of marking unsent email as sent.
- Payment Date was added to the Status and Payment section.
- Invoice PDFs no longer show the temporary company logo box; fully paid invoices show a PAID watermark.
- Paid Amount and Due Amount calculations were clarified: partial payments are included in Paid Amount and remaining balances are included in Due Amount.

Schedule, Crew, and Services

- Schedule views now collapse duplicate job status records into one visible job, keeping the latest status.
- Crew assigned job history, crew metrics, crew exports, and crew-user views also use the same duplicate consolidation.
- Services no longer shows the extra instructional line above the table.
- The Linked Jobs service card is now clickable and opens the Jobs screen.
